

WIRE WOUND RESISTORS SILICONE COATED TYPE

VHIA SERIES

HIGH SURFACE TEMPERATURE Power Silicone "Thermo Coat"

Wire Wound Resistors

Industrial / Professional Applications

- Flame retardant coating compatible with UL standards
- Small Size : Power Ratio.
- 0.5W to 20 Watts (at 40°C)
- Tolerances as close as 1%.
- R01 to 120K.
- TCR as low as +20ppm/°C available depending on application and resistance value.
- Pulse applications as per IEC 61000-4-5.

20AC	20W	67.0	10.0	38	0.8	90	R10	120K	11.5
20AC1	20W	67.0	10.0	38	1.0	90	R10	120K	12.0

\varnothing For non-inductive types and for resistance values $< 1R0 + 0.8\text{mm}$ allowed
 \oplus For resistance values less than R10 & tolerance less than $\pm 2\%$ please measure resistance over centered length LM.

Note :

1. The standard terminals in this series is tinned Copper Weld®.
2. For Pulse capability please refer to Electrical data / characteristics section.

NON-INDUCTIVE RESISTORS

Low inductance Ayrton - Perry winding type resistors are available in this series.
 For non-inductive types reduce maximum resistance values shown to 50% and the continuous working voltage to 70%.

PRE-FORMED LEADS

The resistors terminations can be bent and cut as per requirements for quick PCB mounting.
 Please send detailed drawings of the type of preforming required.

VHIA

ELECTRICAL DATA / CHARACTERISTICS

PARAMETER/PERFORMANCE TEST & TEST METHOD	PERFORMANCE REQUIREMENTS
Rated Ambient Temperature down to zero at 350°C - [Refer Derating curve above].	Full Power dissipation at 40°C and linearly derated
Voltage Rating / Limiting Voltage / Max Working Voltage	$V = \sqrt{P \times R}$
Dielectric Withstanding Voltage / Voltage Proof [Test method no. 301 of MIL 202F] - Based on limiting voltage x 2 or 500V whichever is applicable.	Max. $\Delta R \pm (1\% + R05)$. No flashover, mechanical damage, arcing or insulation breakdown.
Insulation Resistance [Test method no. 302 of MIL 202F]	> 1000M (dry) > 100M (wet)
Short Time Overload [Test Method - 5 secs at 5 times rated power for 3 watts and smaller; 5 secs at 10 times rated power for 4 watts and larger]	Max. $\Delta R \pm (2\% + R05)$
Resistance Tolerances Available	$\pm 10\%[K]; \pm 5\%[J]; \pm 3\%[H]; \pm 2\%[G]; \pm 1\%[F]$

Resistor Temperature rise as a function of applied power

[See graph displayed]

The graph provided is general in nature and reflects temperature rise of a few selected types for the general guidance of the design engineer. Exact reading for any particular HTR type and specific resistance value can be obtained from factory on request.

Pulse Capability :

For the design engineer HTR has selected a few types and provided below, vital data in the form of charts / graphs which illustrate two important characteristics of the pulse version of these HTR types.

Pulse On Regular Basis - The maximum allowable peak pulse power (W) as a function of pulse duration (T) in seconds. (Repetitive Pulse) - t_p repetition time of the pulses / t_i - impulse time-duration of pulse.

The design engineer is cautioned that these graphs are general in nature solely provided for his general guidance for selection of the required power rating and resistance of the device to be used for circuit protection. It is essential that this must be validated in actual trials and HTR will be pleased to provide the necessary samples for validation and homologation.

Please suffix the HTR type with the alphabet 'I' when a pulse version of the device is required.

ENVIRONMENTAL SPECIFICATIONS

PARAMETER/PERFORMANCE TEST&TEST METHOD	PERFORMANCE REQUIREMENTS
Temperature Co-efficient [Test method 304 of MIL 202F] [TCR figures given are based on the usage of normally effective resistance elements and can be significantly lowered on request]	$\pm 120\text{ppm}/^{\circ}\text{C}$ for $< R10$; $\pm 80\text{ppm}/^{\circ}\text{C}$ for $< 1R0$; $\pm 60\text{ppm}/^{\circ}\text{C}$ for $< 100R$; $\pm 90\text{ppm}/^{\circ}\text{C}$ or $\pm 30\text{ppm}/^{\circ}\text{C}$ for $> 100R$, depending on wire selected
Damp Heat (Steady State) [Test method no. 103B of MIL 202F and test condition 'D']	Max. $\Delta R \pm [5\% + R05]$ No mechanical damage.
Load Life [Test method no. 108A of MIL 202F]	Max. $\Delta R \pm [5\% + R05]$ No mechanical damage

MECHANICAL SPECIFICATIONS

PARAMETER/PERFORMANCE TEST&TEST METHOD	PERFORMANCE REQUIREMENTS
Pull test / Robustness of Terminations [Force supplied from 2 to 4.5 Kgs depending on size]	No mechanical damage
Solderability [Test method no. 208F of MIL 202F]	Continuous and satisfactory $\Delta R < \pm [1\% + R05]$

ORDERING INFORMATION

Series	Type	Packing	Resistance Value	Tolerance
VHIA	5AC / 5AC*	Bulk 5AC / 5AC* Tape & Ammo 5ACT / 5AC*T Tape & Reel 5ACTR / 5AC*TR	100R	J

1. RoHS version - 0.5 MC *
2. Non inductive winding - N 0.5 MC
3. Impulse type - 0.5 MC I
4. Tape & Ammo pack - 0.5 MC T
5. Tape & Reel pack - 0.5 MC TR

Taping : Types 0.5MC, 1MC, 1AC, 4C, 3C, 3MC, 4MC, 2.5C1, 2.5C, 5C1, 5AC, 5C, 7AC, 4CL, 7C1, 10AC, 10C, 10C1, 15AC, 15AC1 are available in taped form. Please refer Tape / Ammo specifications. Tape / Reel on request.
