

Multilayer Ceramic Chip Capacitors

Introduction

Multilayer Surface Mount Ceramic Capacitors are constructed by screen printing alternative layers of internal metallic electrodes onto ceramic dielectric materials and firing into a concrete monolithic body, then completed by application of metal end terminations which are fired to assure permanent bonding with the individual internal electrodes.

Multilayer ceramic capacitors have various features such as large capacitance values in small sizes and excellent high frequency characteristics.

Moreover, chip capacitors can be used on surface mount assembly equipment. Our fully integrated manufacturing and total quality control systems ensure unprecedented high standards of quality and reliability.

Chip Capacitor Selection

Selection of the most suitable capacitor for any application is based on the following:

Dielectric Type

The choice of dielectric is largely determined by the temperature stability required.

COG (NPO)

Capacitance change with temperature is 0-30ppm/ $^{\circ}\text{C}$ which is less than -0.3%/ $^{\circ}\text{C}$ from -55 $^{\circ}\text{C}$ to +125 $^{\circ}\text{C}$. Typical capacitance change with life is less than -0.1% for NPOs, one-fifth that shown by most other dielectrics. NPO formulations show no aging characteristics.

X7R/X5R

Its temperature variation of capacitance is within $\pm 15\%$ from -55 $^{\circ}\text{C}$ to +125 $^{\circ}\text{C}$ (-55 $^{\circ}\text{C}$ to +85 $^{\circ}\text{C}$ for X5R). The capacitance change is non-linear.

Z5U

Despite their capacitance instability, Z5U formulations are very popular because of their small size, temperature range low ESL, low ESR and excellent frequency response. These features are particularly important for decoupling application where only a minimum capacitance value is required.

Y5V

Y5V formulations are for general purpose use in a limited temperature range. They have a wide temperature characteristic of +22% - 82% capacitance change over the operating temperature range of -30 $^{\circ}\text{C}$ to +85 $^{\circ}\text{C}$. Y5Vs high dielectric constant allows the manufacture of very high capacitance values (up to 22MF) in small physical sizes.

Capacitance Value & Tolerance

Determined by circuit requirements. Note that chip prices decrease with lower capacitance value and looser tolerance.

Voltage

Determined by circuit requirements. Units are designed to exceed the withstanding voltage specification, i.e., the user need not incorporate an additional safety margin.

Capacitor Size

Select the smallest unit permitted by the circuit constraints that provides the required capacitance and voltage rating. All Cal-Chip capacitors conform to EIA specifications.

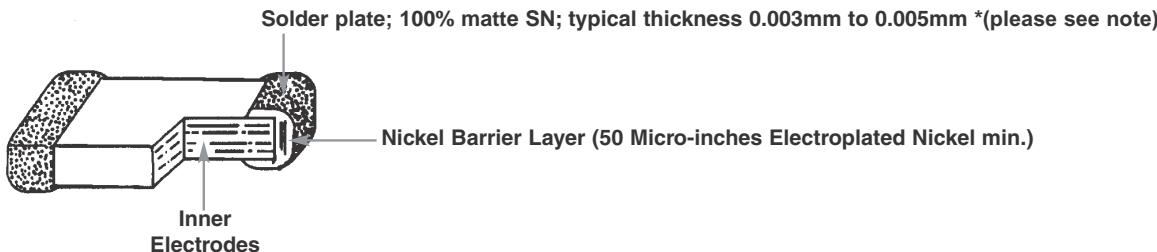

Capacitor Termination

Nickel barrier is standard and recommended for units exposed to repeated solder cycles, to minimize leaching of the termination.

Multilayer Ceramic Chip Capacitors

Construction

Example

| GMC21 | CG | 102 | J | 50 | N | T |
|---|--------------|------------------|----------------------------------|--|-------------|----------------|
| Size Code | Dielectric | Capacitance (pF) | Capacitance Tolerance (EIA Code) | Voltage | Termination | Packaging Code |
| CG (COG) (NPO) X7R or X5R Z5U Y5V | | | | | | |
| | | | | | | |
| Capacitance values are represented in 3 digits, and expressed in pF. The first two digits are significant, and the third is the number of zeros. The letter "R" is used as a decimal point. | | | | | | |
| 0R5 | 0.5pF | | B | $\pm 0.1\text{pf}$ for $\leq 10\text{pF}$ | 6r3 | 6.3 DC |
| 5R0 | 5pF | | C | $\pm 0.25\text{pF}$ for $\leq 10\text{pF}$ | 10 | 10 DC |
| 100 | 10pF | | D | $\pm 0.5\text{pF}$ for $\leq 10\text{pF}$ | 16 | 16 DC |
| 101 | 100pF | | F | $\pm 1\%$ | 25 | 25 DC |
| 102 | 1000pF | | G | $\pm 2\%$ | 50 | 50 DC |
| 103 | .01uF | | J | $\pm 5\%$ | 100 | 100 DC |
| 104 | .1uF | | K | $\pm 10\%$ | 200 | 200 DC |
| 105 | 1.0uF | | M | $\pm 20\%$ | | |
| 106 | 10uF | | Z | -20%~+80% | | |
| NX* - Optional "SoftTerm" | | | | | | |
| Available in select values, contact your sales associate for more information | | | | | | |
| T* Tape and Reel | | | | | | |
| *Optional "TD" designates large 10 inch or 13 inch reels - see packaging on pg.13 & 14 | | | | | | |
| GMC02 = 0201 | GMC21 = 0805 | GMC40 = 1808 | GMC55 = 2220 | | | |
| GMC04 = 0402 | GMC31 = 1206 | GMC43 = 1812 | GMC57 = 2225 | | | |
| GMC10 = 0603 | GMC32 = 1210 | GMC45 = 1825 | | | | |

Note: Calchip has completed the Lead-Free transition. All parts shipped with or without the "custom designator" LF at the end of the part number will be Lead-Free. Lead-Free material will still continue to have an LF at the end of the Lot Code and a green RoHS symbol on the label. Please contact your sales associate if you require non-RoHS material.

Multilayer Ceramic Chip Capacitors

COG Dielectric

Ultra stable class I dielectric: linear temperature coefficient, low loss, negligible change of electrical properties with time, voltage and frequency.

| Operating Temperature Range | Temperature Coefficient | Temperature Voltage Coefficient ($\Delta c_{Max} @ V_{DCW}$) | Dissipation Factor | Insulation Resistance | Dielectric withstandng Voltage | Aging Rate | Test Parameters |
|-----------------------------|-------------------------|--|-------------------------|---|--------------------------------|--------------------|--|
| -55°C to +125°C | 0±30ppm°C | 0±30ppm/°C | 0.1% Max, 0.02% Typical | <ul style="list-style-type: none"> • 25°C, $V_{DCW} > 100G\Omega F$ or $1000\Omega F$, whichever is less • 125°C, $V_{DCW} > 10G\Omega F$ or $100\Omega F$, whichever is less | 3 X V_{DCW} | 0% per decade hour | <ul style="list-style-type: none"> • $C \leq 1000pF$ $f = 1MHz$ $V = 1.0Vrms \pm 0.2Vrms$ $T = 25^\circ C$ • $C > 1000pF$ $f = 1KHz$ $V = 1.0Vrms \pm 0.2Vrms$ $T = 25^\circ C$ |

X7R Dielectric

Stable class II dielectric (EIA X7R)

| Operating Temperature Range | Temperature Coefficient | Temperature Voltage Coefficient ($\Delta c_{Max} @ V_{DCW}$) | Dissipation Factor | Insulation Resistance | Dielectric withstandng Voltage | Aging Rate | Test Parameters |
|-----------------------------|-------------------------|--|------------------------|---|--------------------------------|---------------------|--|
| -55°C to +125°C | ±15% | X7R Not Applicable | 2.5% Max, 1.8% Typical | <ul style="list-style-type: none"> • 25°C, $V_{DCW} > 100G\Omega F$ or $1000\Omega F$, whichever is less • 125°C, $V_{DCW} > 10G\Omega F$ or $100\Omega F$, whichever is less | 2.5 X V_{DCW} | <2% per decade hour | 1KHz, 1.0Vrms $\pm 0.2Vrms$ $25^\circ C$ values > or = to 10uF 1.0Vrms 120Hz |

Multilayer Ceramic Chip Capacitors - Z5U (Y5V) Dielectric

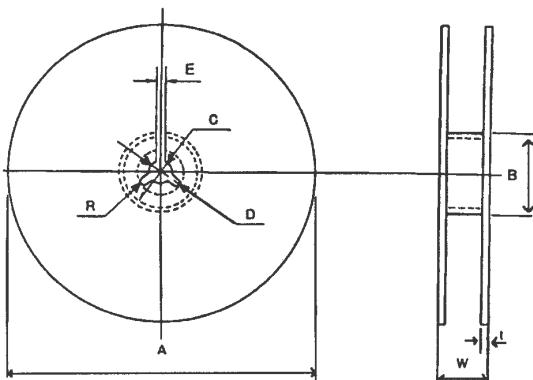

High capacitance per unit volume: general purpose product

| Operating Temperature Range | Temperature Coefficient | Dissipation Factor | Insulation Resistance | Dielectric withstanding Voltage | Aging Rate | Test Parameters |
|-----------------------------|-------------------------|------------------------|---|---------------------------------|----------------------|--|
| -30°C to +85°C | +22% to -82% | 3.0% Max, 2.0% Typical | 10GΩ or 100ΩF whichever is less, 25°C, VDCW | 2.5 X VDCW | 3.0% per decade hour | 1KHz, 1Vrms 25°C values > or = to 10uF 1.0Vrms 120Hz |

Packaging (Taping)

| ø250 ±2.0 | ø50 min. | ø13.0 ±0.5 | ø21.0 ±0.8 | 2.0 ±0.5 | 10.0 ±1.5 | 0.8 ±0.2 | 1.0 |

Carrier Tape (Standard)

- To peel off the cover tape by the method shown in the right figure apply a peel-off force of 20 gf - 60 gf (card board); 35 gf - 75 gf (plastic tape).
- The cover tape should not touch the top or bottom of the chip.
- If the cover tape has been peeled off it may be difficult to remove the chip due to punch-hole clearance, dirt, and debris. Make sure therefore that no paper waste will adhere to and block the absorption nozzle.
- If the cover tape has been peeled off from the top, stick it back on with a suitable adhesive.
- Follow the illustration for the start and end of the winding operation.

Multilayer Ceramic Chip Capacitors

- Cardboard carrier tape for 0402,0603 type and 0805/1206 type

Unit: mm

| Type | A | B | W | F | E | P1 | P2 | P0 | D0 | t1 | t2 | Mounting Hole | Std Reel Qty. 7in (10/13in)* |

Room temperature. Dwell for 15 minutes. 2. Minimum operating temperature, dwell for 30 minutes. 3. Room temperature, dwell for 30 minutes. 4. Maximum operating temperature, dwell for 30 minutes. After above testing condition, samples shall be kept in room temperature for 24 hours (Class I) or 48 hours (Class II), and then shall be measured. |
| | Q or DF | To satisfy the specified initial value. | |
| | IR | To satisfy the specified initial value. | |
| Solderability | | Termination area shall be at least 95% covered with a new solder coating. There shall be no crack and ceramic exposure of terminated surface by melting. | The capacitors are completely immersed during 4 ± 0.5 seconds in the molten solder with a temperature of $230 \pm 5^\circ\text{C}$ *Solder: Sn 63. |
| Resistance to Solder Heat Test | ΔC | <ul style="list-style-type: none"> Class (I) No more than $\pm 2.5\%$ or $\pm 0.25\text{pF}$ whichever is larger Class (II) $X7R:\pm 5\%$ $Y5V/Z5U:\pm 20\%$ | Immerse into molten solder at $270 \pm 5^\circ\text{C}$ for 3 ± 0.5 seconds. Preheat before immersion. 1. $80 \sim 100^\circ\text{C}$ for 2 minutes. 2. $150 \sim 180^\circ\text{C}$ for 2 minutes. 3. $270 \pm 5^\circ\text{C}$ for 3 ± 0.5 seconds. |
| | Q or DF | To satisfy the specified initial value. | The capacitance measurement shall be made after sample keeping at room temperature for 24 hours. |
| | IR | To satisfy the specified initial value. | |

APPLICATION MANUAL FOR SURFACE MOUNTING

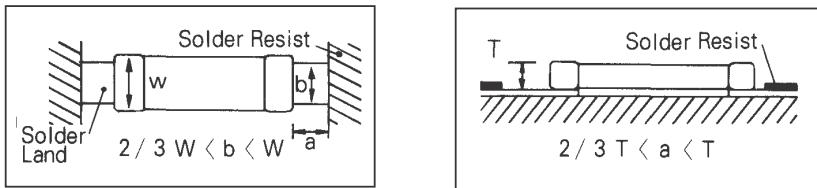

1. Temperature / Humidity Control

Since dew condensation may occur by the differences in temperature when the products are taken out of storage, it is important to maintain a temperature-controlled environment.

2. Design of Solder Land Pattern

When designing printed circuit boards, the shape and size of the solder lands must allow for the proper amount of solder on the capacitor. The amount of solder at the end terminations has a direct effect on the probability that the chip will crack. The greater amount of solder, the larger amount of stress on the chip, and the more likely that it will break. Use the following illustrations as guidelines for proper solder land design.

Recommendation of solder land shape and size.

3. Adhesives

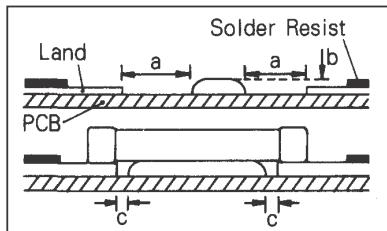

MLCCs generally require the use of an adhesive to adhere the chips to the circuit board prior to wave soldering.

3-1. Requirements for Adhesives

- They must have enough adhesion so that the chips will not fall off or move during the handling of the circuit board.
- They must maintain their adhesive strength when exposed to soldering temperatures.
- They should not spread or run when applied to the circuit board.
- They should have a long pot life.
- They should harden quickly.
- They should not corrode the circuit board or chip material.
- They should be a good insulator.
- They should be non-toxic, and not produce harmful gases, nor be harmful when touched.

3-2. Application Method

It is important to use the proper amount of adhesive. Too little will cause poor adhesion to the circuit board, and too much may strain the conductor pattern, thereby causing defective soldering. The following illustrations show the proper quantity of adhesive.

| (Unit: mm) | | |
|------------|----------|----------|
| Type | 21 | 31 |
| a | 0.2 min | 0.2 min |
| b | 70~100μm | 70~100μm |
| c | >0 | >0 |

3-3. Adhesive Hardening Characteristics

To prevent oxidation of the terminations, the adhesive must harden at 160°C or less, within 2 minutes or less.

Multilayer Ceramic Chip Capacitors

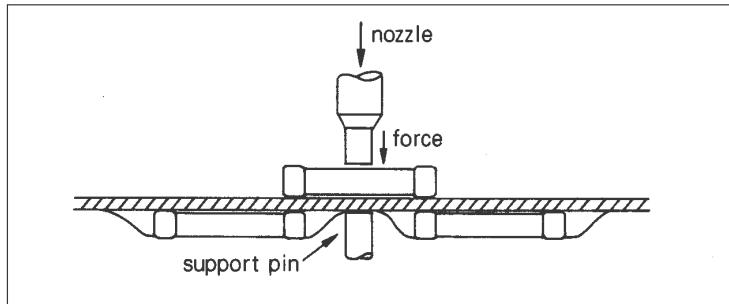

4. Mounting

4-1. Mounting Head Pressure

Excessive pressure will cause chip capacitors to crack. The pressure between nozzle and chip capacitor will be 300g maximum during mounting.

4-2. Bending Stress

Bending of printed circuit board by mounting head when double-sided circuit boards are used, chip capacitors first are mounted and soldered onto one side of the board. When the capacitors are mounted onto the other side, it is important to support the board as shown in the illustration. If the circuit board is not supported, it may bend, causing the already installed capacitors to crack.

5. Flux

Although highly activated flux gives better solderability, substances which increase activity may also degrade the insulation of the chip capacitors. To avoid such degradation, it is recommended that a mildly activated rosin flux (less than 0.2% chlorine) be used.

6. Soldering

Since a multilayer chip ceramic capacitor comes into direct contact with melted solder during soldering, it is exposed to potentially damaging mechanical stress caused by the sudden temperature change. The capacitor may also be subject to silver migration, and to contamination by the flux. Because of these factors, soldering technique is critical.

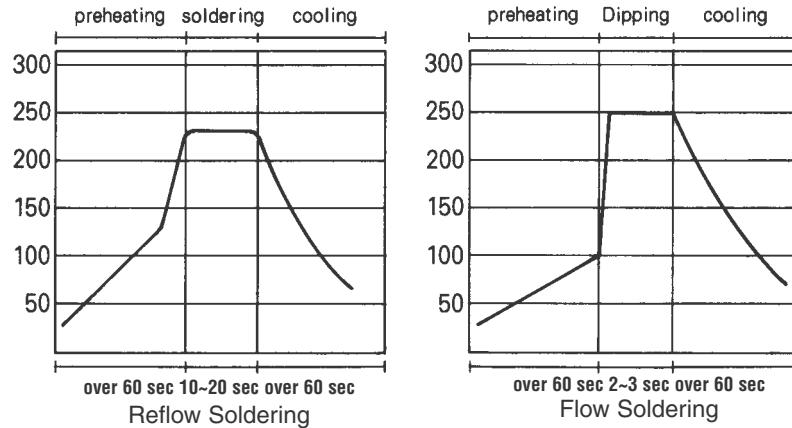

6-1. Soldering Methods

| Method | Classification | |
|---------------------|---------------------|--|
| Reflow Soldering | Mass reflow | <ul style="list-style-type: none"> • IR/Convection • VPS (Vapor phase) |
| | Selective reflow | <ul style="list-style-type: none"> • Hot air/gas • Laser |
| Flow Soldering | Dual Wave | |

6-2. Soldering Profile

To avoid the crack problem by sudden temperature change, follow the temperature profile in the adjacent graph.

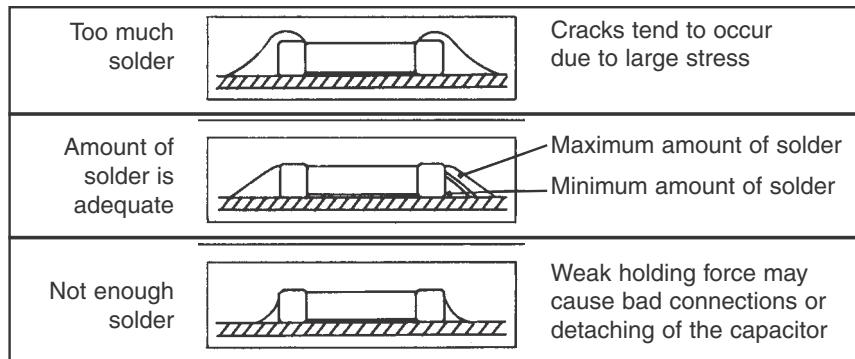

Multilayer Ceramic Chip Capacitors

6-3. Manual Soldering

Manual Soldering can pose a great risk of creating thermal cracks in chip capacitors. The hot soldering iron tip comes into direct contact with the end terminations, and operator's carelessness may cause the tip of the soldering iron to come into direct contact with the ceramic body of the capacitor. Therefore the soldering iron must be handled carefully, and close attention must be paid to the selection of the soldering iron tip and to temperature control of the tip.

6-4. Amount of Solder

6-5. Cooling

Natural cooling using air is recommended. If the chips are dipped into solvent for cleaning, the temperature difference (ΔT) must be less than 100°C.

6-6. Cleaning

If rosin flux is used, cleaning usually is unnecessary. When strongly activated flux is used, chlorine in the flux may dissolve into some types of cleaning fluids, thereby affecting the chip capacitors. This means that the cleaning fluid must be carefully selected, and should always be new.

7. Notes for Separating Multiple, Shared PC Boards

A multi-PC board is separated into many individual circuit boards after soldering has been completed. If the board is bent or distorted at the time of separation, cracks may occur in the chip capacitors. Carefully choose a separation method that minimizes the bending of the circuit board.

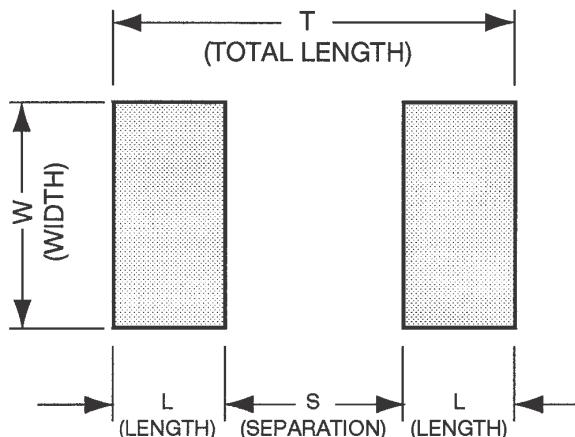

APPLICATION INFORMATION ON SOLDER PAD DESIGN FOR SURFACE MOUNT CHIP CAPACITOR

Recommended Pad Dimensions

| Chip Size | Dimensions (inches) | | | |
|-----------|---------------------|-------|-------|-------|
| | L | W | S | T |
| 0402* | 0.021 | 0.022 | 0.017 | 0.059 |
| 0603* | 0.035 | 0.030 | 0.030 | 0.100 |
| 0805 | 0.040 | 0.050 | 0.040 | 0.120 |
| 1206 | 0.040 | 0.065 | 0.080 | 0.160 |
| 1210 | 0.040 | 0.100 | 0.080 | 0.160 |
| 1812* | 0.050 | 0.120 | 0.130 | 0.230 |
| 1825* | 0.050 | 0.250 | 0.130 | 0.230 |
| 2220 | 0.050 | 0.250 | 0.130 | 0.230 |
| 2225* | 0.050 | 0.250 | 0.170 | 0.270 |
| 3640* | 0.060 | 0.400 | 0.300 | 0.420 |

*These sizes are recommended for use with IR and vapor phase soldering only.
