Description

The T62M99A is an echo/surround effect processor designed for various audio system applications such as Karaoke, television, VCD/DVD, sound equipment ,..... Etc. It consists of a built-in Voltage controlled Oscillator, Embedded 48Kbits SRAM, A/D and D/A converters as well as echo/surround delay time control logic.

The embedded 48Kbits SRAM can generate delay time effect through the external VCO resistor control which simplifies the application and make it easy adjustment.
