# Essex® Fine Wire Copper Products

Thermal Class	NEMA Designation	IEC Designation	Product Name		Insulation
			North America / Far East	Europe / Far East	
105°C	MW 15	IEC 60317-1	Formvar	—	Polyvinyl Acetal
155°C	MW 136	—	Soderbond® N / 155	—	Polyurethane / Nylon / Butvar
155°C	MW 131	IEC 60317-35	—	Magnebond® UV-155	Polyurethane / Polyvinylbutyral
155°C	MW 131	IEC 60317-35	—	Magnebond® UL-155	Polyurethane / Aliphatic Polyamide
155°C	MW 79	IEC 60317-20	Soderex® / 155	Magnesol® U-155	Polyurethane
155°C	MW 80	IEC 60317-21	Soderon® / 155	Magnesol® UN-155	Polyurethane / Polyamide
180°C	—	IEC 60317-37	—	Magnebond® CL-180	THEIC Polyesterimide / Aliphatic Polyamide
180°C	—	IEC 60317-35	—	Magnebond® UL-180	Polyurethane / Aliphatic Polyamide
180°C	MW 30, MW 72	IEC 60317-8	—	Magnetemp® C-180	THEIC Polyesterimide
180°C	MW 77	IEC 60317-23	Solidex®	Magnesol® E-180	Solderable Polyester(imide)
180°C	MW 78	—	Solidon®	Magnesol® EN-180	Solderable Polyester(imide) / Polyamide
180°C	MW 82	IEC 60317-51	Soderex® / 180	Magnesol® U-180	Polyurethane
180°C	MW 83	IEC 60317-55	Soderon® / 180	Magnesol® UN-180	Polyurethane / Polyamide
180°C	Reference MW1000 for dimension data only *	—	Polybondex®	—	Modified Polyester / (with or without Polyamideimide) / Bondcoat
200°C	MW 35, MW 73	IEC 60317-13	GP/MR-200®	Magnetemp® CA-200	THEIC Polyester or Polyester(imide) / Polyamideimide
200°C	MW 74	IEC 60317-42	Thermalex 200®	—	THEIC Polyester
200°C	—	IEC 60317-38	—	Magnebond® CAB-200	THEIC Polyesterimide / Polyamide-imide / Aromatic Polyamide
220°C	MW 81	IEC 60317-26	AI	Magnetemp® A-220	Polyamideimide
240°C	MW 16	IEC 60317-46	Allex®	Magnetemp® Y-240	Polyimide

Note:

- Special builds, additional sizes and colors available upon request. For additional details or specific requests, please contact Essex Magnet Wire Marketing at [finewire@spsx.com](mailto:finewire@spsx.com) or by one of the phone numbers listed on the back of this brochure.
- Products listed are UL recognized with the exception of Formvar.

\* MW 102 for Polybondex® Bond E and Bond S products.

Characteristics	Applications
Excellent flexibility, adhesion, and abrasion scrape resistance. Good thermal shock resistance.	Oil-filled transformers, motors, solenoids.
Excellent bond strength at room temperature.	Helical and toroidal coils, solenoid coils, voice coils.
Very low bonding temperature (low energy), solvo-bonding can be used, excellent performance for ultra-fine applications.	Watch coils, sensors for medical, optics, acoustic measurement equipment, hearing aids.
Bonding at low temperature and good solderability.	Small motors, electromagnetic coils.
Polyurethane insulation allows soldering without prior removal of the film from the wire. Excellent resistance to moisture and most common solvents. Excellent solderability and elevated thermal properties.	Appliance motors, relays, timers and clock coils, encapsulated coils, bobbin wound coils, small motors, automotive coils, toroidal coils.
Same characteristics as Soderex with the advantages of a nylon topcoat. The nylon topcoat helps provide improvement in the windability and tolerates more severe winding operations.	Appliance motors, relays, timers and clock coils, encapsulated coils, bobbin wound coils, small motors, toroidal coils, transformers, components for automotive.
High thermal properties, good chemical resistance, low bonding temperature.	Small motors, RFID coils.
Bonding at low temperature and good solderability.	Deflection yokes for monitors, small motors, electromagnetic coils.
High thermal properties, good chemical resistance.	Small motors, ignition coils, transformers.
Solderability is coupled with a need for high thermal resistance.	Automotive controls, relays, ABS coils, ignition coils, solenoids, appliance controls, coils, small motors, small transformers.
Good solderability at high temperatures. Enhanced by addition of a polyamide overcoat. Excellent resistance to thermal stress.	Applications submitted to high thermal stresses: automotive components, ignition coils, small motors, solenoids, appliance controls, small transformers.
Designed for applications requiring both high thermal resistance and low soldering temperatures.	Relays, automotive coils, specialty power transformers, appliance controls, automotive controls, solenoids, motors.
Designed for applications requiring both high thermal resistance and low soldering temperatures. The nylon topcoat helps provide improvement in the windability and tolerates more severe winding operations.	Bobbin wound and paper section coils, molded and encapsulated coils, small motors, armatures and fields, toroidal coils, linear motors, relays, transformers, watch coils, components for automotive, ignition coils.
Different constructions of bondable wire having a GP/MR-200® or Thermalex 200® base insulation with a thermoplastic bondcoat. Bondcoat allows the use of resistance, induction, or radiant heating to flow the bond.	Armatures, bobbinless coils, brake, clutch and ignition coils, motors, relays, sensors, solenoids, stators, transformers.
Standard of excellence for motor repair with high moisture resistance and ease of insertion. Film insulation has physical toughness, excellent dielectric properties, and superior chemical resistance to common solvents and refrigerants.	Applications submitted to high stresses (thermal, chemical and/or mechanical). Fractional and integral horsepower motors, hermetic motors, DC motors, automotive alternators and generators, power tool motors, dry type transformers (Class 105 through 200).
Thermally stable, modified polyester film and has excellent physical, chemical and electrical properties for small coils operating at high temperatures.	Small appliance and power tool motors, continuous operation coils, encapsulated coils, sub-fractional instrument and servo-motors, DC motors, fractional and integral horsepower motors.
High bonding strength and high resoftening temperature.	Stators and rotors, dry transformers.
Provides unsurpassed scrape and abrasion resistance. The combination of high moisture and chemical resistance makes it suited for the most demanding of applications. Excellent resistance to thermal and chemical stresses.	Applications submitted to high thermal stress or to radiations especially, adapted to nuclear needs. Fractional and integral horsepower motors, high temperature continuous duty coils and relays, hermetic and sealed units, heavy duty hand tool motors, encapsulated coils.
Exceptional resistance to chemical solvents and burn-out, outstanding thermoplastic flow and ability to withstand excessive overloads in extreme conditions. Excellent resistance to thermal and chemical stresses.	Aerospace, nuclear, medical, fractional and integral horsepower motors, high temperature continuous duty coils and relays, hermetic and sealed units, heavy duty hand tool motors, encapsulated coils. Used when particular high thermal resistance is required: special relays, transformers, generators, motors.

All Fine Wire Products are exclusively subject to Essex's product warranties set forth in Essex's Standard Terms and Conditions of Sale Pertaining to Magnet/Winding Wire Products and Services which can be located on Essex's website at [www.superioressex.com](http://www.superioressex.com).

The information provided in this chart is provided for convenience only and is intended to identify products available within the corresponding thermal classes and NEMA and IEC designations. No representations or comparisons as to the quality, attributes, reliability or performance of the listed products are intended or expressed.

To ensure the best performance with Essex® fine wire, please be sure to exert special care when handling. We suggest the following guidelines:

#### DURING INCOMING SHIPMENTS

- ✓ All incoming shipments should be checked for damage during transportation. The inspection should occur while the freight carrier is present at your location. Any damage should be properly noted on the delivery receipt.
- ✓ When using a fork lift or hand cart, be careful not to bump the outside of the packaging as this may damage the magnet wire.

#### DURING WIRE STORAGE

- ✓ Avoid double stacking the wire pallets.
- ✓ Store packages on their original pallets and keep unused spools safely stored in their original packages until needed. Store the wire package in a dry, non-corrosive location. Keep the wire protected from dust and other contaminants.
- ✓ Spools should be placed back into their original packaging and maintained in a manner to prevent damage with other items, including other spools.

Note: Data from NEMA Standards Publication MW 1000, NEMA doesn't cover half sizes finer than 30 AWG.

For metric size information, please consult Magnet Wire Marketing.

\*Theoretical nominal bare diameter for sizes finer than 45 AWG.

## Essex® Fine Wire Handling Suggestions

### DURING WIRING HANDLING

- ✓ Do not stack spools outside of the original Essex packaging.
- ✓ When removing spool from its original packaging, be sure that it can be freely removed without the risk of touching anything, including the packaging itself.
- ✓ To protect the wire enamel, do not remove the spool wrapper until ready to load the spool onto the winding equipment. Use extreme caution when removing the tape from the wrapper and place wrappers back in cartons for reuse.
- ✓ Care should be taken when handling spools near jewelry, metal objects, or chemicals; contact may damage the wire enamel.
- ✓ Avoid placing your fingers too far into the packaging handling slots; contact may damage the wire enamel.
- ✓ Carry the spools by using the provided hand holes or handles.

### DURING MANUFACTURING PROCESS

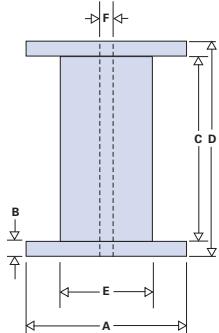

- ✓ Check top flanges for any damage; use very fine grit sand paper to remove minor nicks on the flanges.
- ✓ If the spool is to be returned to its original packaging for later usage, please secure the loose end by tying it to the flange.
- ✓ Keep the spool as straight as possible when inserting into a payoff shroud.
- ✓ Maintain proper tension control during wire payoff.

### DURING WIRE RETURNS

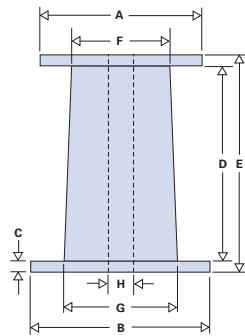

- ✓ If the magnet wire must be returned, please contact your Essex representative.

Note: This table is provided as a general guide only; the appropriate winding tensions may vary depending on a number of factors including product application. The type of winder, payoff device, and type of coil may vary the tensions to be used. In general, use the minimum tension that provides a good winding. Some minor variations in the softness of the wire from one lot to another may also dictate minor adjustments in winding tension.

1. Using the yield strength of fully annealed wire as a point of reference, tensions beyond these may cause excessive stretching and high coil resistance.
2. Maximum recommended tensions are based upon 10,000 p.s.i. for copper.
3. Theoretical dimensions for sizes 45 AWG and finer.

Note: Start-up acceleration surge can produce tensions well in excess of production tensions and need to be taken into consideration.
